David del Pino Kloques

*delpinok@gmail.com*

The OCTBR (pronounced “October”) tool is a Creative Commons-licensed rubric developed originally for health science instructors, to provide perspectives and resources for building online courses, assessments and experiences.

OCTBR has been influenced by student survey feedback, and excellent Creative Commons-licensed rubrics and tools, namely CSU-Chico’s QOLT (*Quality Online Learning and Teaching*) instrument, and Joan Van Duzer’s *Instructional Design Tips for Online Learning*, and reflects on peer-reviewed learning and assessment strategies specific to health science education. Some institutional design rubrics are primarily used as an evaluation and/or scoring tool for courses. Other rubrics are excellent for introducing philosophical ideas about instructional design to a neophyte instructor. Both practices are not as well suited for faculty who must design a course and assessments while also juggling 12 hour shifts, Grand Rounds, surgeries, assessing students or residents in clinic, etc. Overall, the intent for OCTBR is not to be prescriptive, but offer concrete strategies for integrating best overall practices in online courses, and successful assessment and learning design in the health sciences.

To improve OCTBR’s ease of use, a group of checklists have been developed for quick reference, since faculty availability, especially among clinical educators, can vary greatly. The different checklists are named to match the time available to build a course or courses launching in the Fall semester (“October”). If a faculty member has an extremely short amount of time to design a course, they would use the Autumn checklist to consider possibilities for their course. If at least a month is available, rather than weeks, the Summer checklist is appropriate. The Spring checklist is for those who have at least three months to build a course, while the Winter checklist is for a course designed almost a year in advance, or several courses developed by a department team.

## Online Course Teaching & Building Rubric (OCTBR)

### Course Overview and Information

<u>Course Components</u>	<b>Basic / Updated Autumn - 1</b>	<b>Core Summer - 2</b>	<b>Accomplished Spring - 3</b>	<b>Best Practice Winter - 4</b>
<b>Introduction to Instructor and Program</b>	<ul style="list-style-type: none"> <li>• Instructor lists email, office telephone and best times for contact.</li> <li>• Instructor schedules and lists times &amp; locations for both online and face-to-face office hours.</li> <li>• Instructor lists email and office telephone for program and/or department.</li> <li>• Instructor lists expected turnaround for email replies (e.g. "48-72 hours Monday through Friday, 8-5").</li> </ul>	<ul style="list-style-type: none"> <li>• Instructor lists email, office telephone and best times for contact.</li> <li>• Instructor schedules and lists times &amp; locations for both online and face-to-face office hours.</li> <li>• Instructor lists email and office telephone for program and/or department.</li> <li>• Instructor lists expected turnaround for email replies (e.g. "48-72 hours Monday through Friday, 8-5").</li> <li>• Distance learners can take an assessment of readiness for online learning (such as Williams &amp; Penn State, n.d., or Stanislaus State &amp; Pillsbury, 2016), and self-assess their abilities, practice and attitudes about online courses.</li> </ul>	<ul style="list-style-type: none"> <li>• Instructor lists email, office telephone and best times for contact, and embeds a picture of themselves.</li> <li>• Instructor schedules and lists locations for both online and face-to-face office hours.</li> <li>• Instructor lists email and office telephone for program and/or department.</li> <li>• Instructor lists expected email turnaround for replies (e.g. "48-72 hours Monday through Friday, 8-5").</li> <li>• An online readiness assessment (such as Williams &amp; Penn State, n.d., or Pillsbury, 2016) helps learners self-assess abilities, practice and attitudes.</li> </ul>	<ul style="list-style-type: none"> <li>• Instructor lists email, office telephone and best times for contact, and embeds a picture of themselves.</li> <li>• Instructor schedules and lists times &amp; locations for both online and face-to-face office hours.</li> <li>• Instructor lists email and office telephone for program and/or department.</li> <li>• Instructor lists expected turnaround for email replies (e.g. "48-72 hours Monday through Friday, 8-5").</li> <li>• Links are provided to the program &amp; department websites.</li> <li>• An online readiness assessment (such as Williams &amp; Penn State, n.d., or Pillsbury, 2016) helps learners self-assess abilities, practice and attitudes.</li> <li>• An introductory &amp; welcome session is held using videoconferencing (Skype, Google Hangout, etc.).</li> </ul>

## Course Design and Accessibility (con't)

### Section 508, Accessibility & Usability:

#### Advanced HTML

#### ADVANCED HTML

- CSS style sheets are available to broaden font variations and colors, but not to designate structural elements like headings, paragraphs, and lists, which are created in HTML or the course management system's content editor. No information is conveyed with CSS formatting only.
- Forms are developed (Ex. HTML, Bb, SoftChalk) with prompting text next to controls, and input elements (e.g. checkboxes).
- No "hover" states trigger actions, just tangible items, secondary menu selections.

#### ADVANCED HTML

- CSS style sheets are available to broaden font variations and colors, but not to designate structural elements like headings, paragraphs, and lists, which are created in HTML or the course management system's content editor. No information is conveyed with CSS formatting only.
- Image maps used for the site are client-side; and offer alt-text for areas and the map.
- Forms are developed (Ex. HTML, Bb, SoftChalk) with prompting text next to controls, and input elements (e.g. checkboxes).
- CSS for positioning and page-wide color controls have been vetted with the CSS disabled to check that no information is lost.
- No "hover" states are used to trigger actions, just tangible items or secondary menu selections.

Instructional Design				
<u>Course Components</u>	<b>Basic / Updated Autumn - 1</b>	<b>Core Summer - 2</b>	<b>Accomplished Spring - 3</b>	<b>Best Practice Winter - 4</b>
<b>Instructional Design</b>	<ul style="list-style-type: none"> <li>• Student learning outcomes or objectives (SLOs) are specifically connected and consistent with learning activities, practice and assessments. These connections are made clear to students.</li> <li>• Learning activities and information are deployed in a generally consistent manner: content folders contain a similar, basic structure regardless of topic.</li> <li>• Standards and requirements to succeed in assignments, including technical requirements, are available in the location where students are submitting their work, as well as in the syllabus.</li> </ul>	<ul style="list-style-type: none"> <li>• Student learning outcomes or objectives (SLOs) are specifically connected and consistent with learning activities, practice and assessments. Assessment				
Course Components	Basic / Updated Autumn - 1	Core Summer - 2	Accomplished Spring - 3	Best Practice Winter - 4
General Assessments	<ul style="list-style-type: none"> <li>Faculty provides a template and rubric to assist with a challenging assignment</li> </ul>	<ul style="list-style-type: none"> <li>Faculty provides a template and rubric to assist with a challenging assignment</li> <li>As students work towards a competency, exercises should enable opportunities for feedback, and clearly be differentiated from regular evaluation (Gruppen, 2015). Test and quizzes can follow with group feedback, helping assist with corrections.</li> <li>A one minute paper format can be used as a sort of qualitative “pop quiz” that measures where students’ current level of knowledge is, prior to a challenging section in the course.</li> </ul>	<ul style="list-style-type: none"> <li>Faculty provides a ‘sketched out’ sample document and rubric to assist with a challenging assignment</li> <li>As students work towards a competency, exercises should enable opportunities for feedback, and clearly be differentiated from regular evaluation (Gruppen, 2015). Test and quizzes can follow with group feedback, helping assist with corrections.</li> <li>A one minute paper format can be used as a sort of qualitative “pop quiz” that measures where students’ current level of knowledge is, prior to a challenging section in the course.</li> </ul>	<ul style="list-style-type: none"> <li>Faculty provides a ‘sketched out’ sample document and rubric to assist with a challenging assignment</li> <li>Past student samples are provided that represent excellent work.</li> <li>As students work towards a competency, exercises should enable opportunities for feedback, and clearly be differentiated from regular evaluation (Gruppen, 2015). Tests and quizzes provide feedback for the group and individually on the correct answers, as well as readings and other resources on the topic to help students fix mistakes.</li> <li>A one minute paper format, or a pre-test/post-test can be used as a sort of qualitative “pop quiz” that measures where students’ current level of knowledge is, prior to a challenging section in the course.</li> <li>For medical and clinical faculty, assessments can tap ACGME’s (2000) Toolbox of Assessment Methods, and the ACGME/ABMS Joint Initiative study rating the best methods of evaluation.</li> </ul>

Assessment				
<u>Course Components</u>	<b>Basic / Updated Autumn - 1</b>	<b>Core Summer - 2</b>	<b>Accomplished Spring - 3</b>	<b>Best Practice Winter - 4</b>
<b>Group Work</b>	<ul style="list-style-type: none"> <li>Group assignments are provided with a rubric (such as the Interpersonal Skills Rubric by Griffin and Novotny, 2006) that specifies expectations for the group, and for specific roles in the group.</li> </ul>	<ul style="list-style-type: none"> <li>Group assignments are provided with a rubric (such as the Interpersonal Skills Rubric by Griffin and Novotny, 2006) that specifies expectations for the group, and for specific roles in the group.</li> <li>A group assessment tool (such as the Peer Evaluation Form for Group Work produced by the Eberly Center at Carnegie Mellon), is provided to help rate the actions of team members.</li> </ul>	<ul style="list-style-type: none"> <li>Group assignments are provided with a rubric (such as the Interpersonal Skills Rubric by Griffin and Novotny, 2006) that specifies expectations for the group, and for specific roles in the group.</li> <li>A group assessment tool (such as the Peer Evaluation Form for Group Work produced by the Eberly Center at Carnegie Mellon), is provided to help rate the actions of team members.</li> </ul>	<ul style="list-style-type: none"> <li>Group assignments are provided with a rubric (such as the Interpersonal Skills Rubric by Griffin and Novotny, 2006) that specifies expectations for the group, and for specific roles in the group.</li> <li>A group assessment tool (such as the Peer Evaluation Form for Group Work produced by the Eberly Center at Carnegie Mellon), is provided to help rate the actions of team members.</li> <li>This tool, or scaffolding that leads to consideration of the tool ratings, is provided prior to the assessment, group project or experience.</li> </ul>
<b>Role Play</b>			<ul style="list-style-type: none"> <li>In an online discussion board, or through the use of Groups in a LMS, learners can be assigned roles that alternate between patient/client, or members of a team working together.</li> </ul>	<ul style="list-style-type: none"> <li>In an online discussion board, or through the use of Groups in a LMS, learners can be assigned roles that alternate between patient/client, or members of a team working together.</li> <li>A team can also run through a more formal modeling exercise (such as the POSE model in Quirk, 2006).</li> </ul>

Assessment				
<u>Course Components</u>	Basic / Updated Autumn - 1	Core Summer - 2	Accomplished Spring - 3	Best Practice Winter - 4
Portfolios			<ul style="list-style-type: none"> <li>Portfolio use is planned in advance not only as a summative or formative tool, but to meet a model format (Webb, 2002): many health science e-portfolios are best served by the carefully shaped “cake mix” or “spinal column” models.</li> <li>All portfolios have clear instructions, guidelines for materials, and grading criteria.</li> <li>A formative learning portfolio can be made available for self-reflection, with assessments developed to match a rubric or other structure (for example, the REFLECT Rubric by Wald, et al, 2012).</li> </ul>	<ul style="list-style-type: none"> <li>Portfolio use is planned in advance not only as a summative or formative tool, but to meet a model format (Webb, 2002): many health science e-portfolios are best served by the carefully shaped “cake mix” or “spinal column” models.</li> <li>All portfolios have clear instructions, guidelines for materials, and grading criteria. Criteria for portfolios can include compensatory or conjunctive scoring, or use a global or analytic rubric, and can use both qualitative and quantitative measurement.</li> <li>A formative learning portfolio can be made available for self-reflection, with assessments developed to match a rubric or other structure (for example, the REFLECT Rubric by Wald, et al, 2012).</li> <li>If portfolio will be formative, and become summative, these uses will be structured separately in the portfolio design (Tekian &amp; Yudkowsky, 2009).</li> </ul>

Assessment				
<u>Course Components</u>	Basic / Updated Autumn - 1	Core Summer - 2	Accomplished Spring - 3	Best Practice Winter - 4
Portfolios (con't)				<ul style="list-style-type: none"> <li>• Where appropriate, assignments in the class can flow directly into pre-defined portfolio sections.</li> <li>• If designed for easy access on mobile devices, portfolios that include knowledge from core didactic classes and problem cases can have a second life as a “toolkit,” a clinical reference for reflecting in action. Mnemonics, graphics, and reflections can be saved in the portfolio, then downloaded to the learner’s phone or mobile device as a HTML or Google Docs-based reference.</li> <li>• Since collecting and reflecting on difficult clinical experiences in an advanced portfolio can prompt stressful feelings among learners (Buckley, Coleman and Khan, 2010), certain sections of the portfolio protect the privacy of learners, so that difficult reflections are accessible to instructors and not the full cohort of a course or program.</li> </ul>

Assessment				
<u>Course Components</u>	Basic / Updated Autumn - 1	Core Summer - 2	Accomplished Spring - 3	Best Practice Winter - 4
Advanced Portfolios				<ul style="list-style-type: none"> <li>Specific competencies in the portfolio are matched to a structured list of competencies, such as elements from AAMC's Clinical Skills Curriculum, ACGME's Competencies or Milestones Project. Expectations for competencies are described for learners in detail.</li> <li>Scaffolding assignments can also be used to develop students' use of the illness scripts concept (Schmidt et al, 1990); for example, after a PICO question assignment, students can repurpose their knowledge by turning items into a script. As scripts are developed they can be stored in a private portfolio, to improve recency and serve as a reference for a clinical rotation.</li> </ul>

Media and Technologies				
Course Components	Basic / Updated Autumn - 1	Core Summer - 2	Accomplished Spring - 3	Best Practice Winter - 4
Technology Literacy	<ul style="list-style-type: none"> <li>Necessary technologies are defined in the course, along with resources that can help students with support</li> </ul>	<ul style="list-style-type: none"> <li>Necessary technologies are defined in the course, along with resources that can help students with support</li> </ul>	<ul style="list-style-type: none"> <li>Necessary technologies are defined in the course, along with resources that can help students with support, including a technical orientation.</li> </ul>	<ul style="list-style-type: none"> <li>Necessary technologies are defined in the course, along with resources that can help students with support, and an assignment that helps students scaffold the skills they need to operate tech.</li> </ul>
Videos	<ul style="list-style-type: none"> <li>Videos and animations are designed with knowledge of the redundancy, modality, and segmenting principles of multimedia (Mayer, 2005; AAMC Institute for Improving Medical Education, 2007). Media is chunked into smaller pieces; visuals or animation paired with narration.</li> <li>Videos should not feature lots of visual text (Mayer and Moreno, 2003), but have on/off captions or a transcription available for accessibility purposes.</li> </ul>	<ul style="list-style-type: none"> <li>Videos and animations are designed with knowledge of the redundancy, modality, and segmenting principles of multimedia (Mayer, 2005; AAMC Institute for Improving Medical Education, 2007). Media is chunked into smaller running time pieces; visuals or animation are paired with aural narration.</li> <li>Videos should not feature lots of visual text (Mayer and Moreno, 2003), but have on/off captions or a transcription available for accessibility purposes.</li> </ul>	<ul style="list-style-type: none"> <li>Videos and animations are designed with knowledge of the redundancy, modality, and segmenting principles of multimedia (Mayer, 2005; AAMC Institute for Improving Medical Education, 2007).
